## Monitoring Study Questionnaire 18 months

**Date questionnaire completed:** //20   
D D M M Y Y

This booklet contains some questions asking about issues relating to the infection in your hip and your general health. There are no right or wrong answers in this questionnaire. Some of the questions may seem repetitive, but it is important that you try and answer all the questions to the best of your ability.

This questionnaire is likely to take between 10-20 minutes to complete.

**Thank you for helping us with this project**

**These questions ask about how you feel about different surgery options.**

- The following questions are slightly different from those you have answered already.
- For a number of good reasons, patients are usually told by their doctors what treatment they will have for infection. We would like to know what you would choose by asking you to imagine you had a choice of treatments in an ideal world.
- The 'side effects' of antibiotics means their unwanted or bad effects.
- If you feel you need support to answer these questions, please telephone your study research nurse or the INFORM office on 01174147867

**Instructions**

You will be shown a number of pairs of possible surgery options for hip infection. For each pair of options, we would like you to do the following:

1. Read carefully through the surgery options presented in each pair.
2. Imagine that this is the first time you have been offered these two surgery options.
3. Tick one box relating to the surgery option you would choose.

Do not worry that the questions look similar, they are all slightly different. They have been carefully designed to help us work out what is important to people who have had infection.

**EXAMPLE – You do not have to answer this question**

Imagine this is the first time you are being offered surgery for your infection and you are being asked to choose one of the following surgery options – would you choose "Option 1" or "Option 2"?

OPTION 1	OPTION 2
