approx., approximately; CAD\$, Canadian dollar; CE, cost-effectiveness; CEA curve, cost-effectiveness acceptability curve; CI, confidence interval; CUA, cost-utility analysis; EUR€, Euro; GBPE, British pound; GP, general practitioner; HSCS, health and social care system; ICER, incremental cost-effectiveness ratio; n, number of participants analysed out of the number randomised; JPY¥, Japanese yen; LTC, long-term Care; PHV, preventive home visit; pyrs, per person-years; QALY, quality-adjusted life year; SD, standard deviation; SE, standard error; SFr, Swiss francs; Soc, societal/ society; Soc (inc. HSCS), societal perspective including health and social care system; USD\$, US dollar; WTP, willingness to pay

Intervention and control group abbreviations are a combination of the following:- ac: available care; ADL: activities of daily living training; aids: provision of aids and adaptations; cgn: cognitive training; comm: technology for communication and engagement; educ: health education; eng: engagement in meaningful activities; excr: physical exercise; hmcr: formal homecare; hmnt: alternative medicine; med: medication review; mfa: multifactorial action; mfar: multifactorial action and follow-on routine review; mntr-mfa: monitoring, which may trigger multifactorial action; ntr: nutritional support; psyc: psychological therapy; rsk-mfa: risk screening, which may trigger multifactorial action; sst: social skills training; vchr: care voucher provision; wlfr: welfare rights advice; w/med: with medication review; w/slfm: with self-management.

- a        ● indicates the category was included in the study evaluation
- b        ✓ indicates that experimental intervention was clearly concluded as a more cost-effective, lower-cost alternative, or recommended by the study authors; X indicates that experimental intervention was explicitly not recommended by the study authors; ~ indicates that no definite conclusion was drawn by the study authors.
- c        Imputation used to replace missing values
- d        Mean difference = Intervention 1 (Int1) group value minus Intervention 2 (Int2) group value
- e        CE plane regions: southeast quadrant represents less costs and more effects (superior), northeast quadrant represents higher costs and more effects, southwest quadrant represents less costs and less effects, northwest quadrant represents higher costs and less effect (inferior)
