

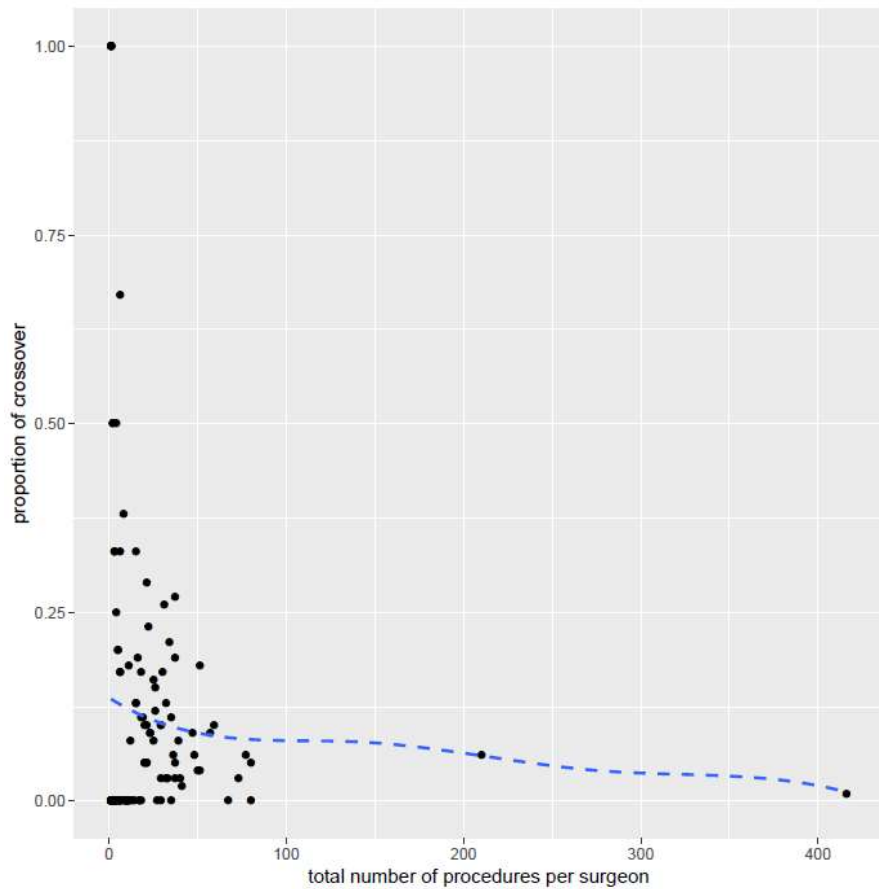

Figure S1: Rates of crossover from Bilateral to Single internal thoracic artery grafting

Data are stratified by total number of cases performed by surgeon. The blue line represents regression line using polynomial spline function (information on participating surgeon was not available for 156 patients). Reproduced from: Taggart, David P et al. “Bilateral versus Single Internal-Thoracic-Artery Grafts at 10 Years.” *The New England journal of medicine* vol. 380,5 (2019): 437-446. doi:10.1056/NEJMoa1808783
