Theory area 1 – Governance and incentives improve health care outcomes
1.What are the characteristics of the governance/ incentives that are used ( what are the measures e.g. LES payments?, contractual obligations, use of audit etc.)
2.What impact do the characteristics of the governance/ incentives have on residents and care homes with specific reference to the five outcomes of interest?
3.What is the overall impact of the Governance and incentives intervention on resident and care home outcomes
4.What is the interaction between the financial incentives and governance and setting in which it is implemented?
5.What impact does the interaction between governance and incentives and the setting have on resident and care home outcomes (interim and long term)?
6.What other interventions are used alongside governance and incentives
7.Is the evidence provided in this theory area good and relevant enough to be included in the synthesis (consider issues of sample size, data collection, data analysis and claims made)

Comments

Theory area 2 –professional/relationship based interventions improve resident and care home related outcomes

1. What are the characteristics of the professional/relationship based interventions?

2. What impact do characteristics of the professional/relationship based interventions have on resident and care home related outcomes

3. What is the interaction between the professional/relationship based interventions and the setting?

--

4. What impact does the interaction between the professional/relationship based interventions and the setting have on resident and care home related outcomes?

--

--

5. What impact does the process of relationship building have in influencing the uptake of interventions and related care home and resident outcomes?

--

6. Is the evidence provided in this theory area good and RELEVANT ENOUGH to be included in the synthesis (consider issues of sample size, data collection, data analysis and claims made)

--

Comments

Theory area 3 – Age appropriate care

1. What are the characteristics of age appropriate care?

2. What impact do the characteristics age appropriate care have on resident and care home related outcomes?

3. What is the overall impact of the age appropriate care (s) used?

4. What is the interaction between the age appropriate care and the setting?

5. What impact does the interaction between the age appropriate care and the setting have on resident and care home related outcomes??

6. Is the evidence provided in this theory area good and relevant enough to be included in the synthesis (consider issues of sample size, data collection, data analysis and claims made)

7. Is there evidence of particular theoretical perspective(s) impacting on the effectiveness of the intervention?

Comments

8. Is there evidence of contextual factors impacting on the effectiveness of the intervention?

9. Is there evidence of the level of the intervention impacting on the effectiveness of the intervention?

10. Is there evidence of the intervention dose impacting on the effectiveness of the intervention?
