Study dates	Population	Intervention	Comparator	Outcomes
January 2010– September 2012 (ongoing)	Children undergoing ear, nose and throat surgery (aged 1–65 years; stratified by age and surgery type)	BIS-guided anaesthesia with propofol and remifentanil	Standard clinical practice anaesthesia with propofol and remifentanil	Primary: anaesthetic consumption; time to extubation Secondary: analgesia consumption; device values
March 2009– February 2012 (record indicates completed but no publications referenced)	Adults aged ≥60 years undergoing elective GA with a planned duration of procedure ≥1 hour	Unblinded BIS monitoring (anaesthetic not specified)	Blinded BIS monitoring (anaesthetic not specified)	Primary: postoperative delirium incidence (DSM-IV) Secondary: device values; postoperative delirium (alternative delirium scores); postoperative cognitive dysfunction; time to discharge (recovery room; hospital); length of stay (recovery room; hospital); QoL (EQ-5D); organ dysfunction at hospital discharge; postoperative pain
February 2011– February 2012 (ongoing)	Adults aged ≥18 years undergoing major abdominal surgery	BIS-guided anaesthesia with sevoflurane and muscle relaxant	Routine anaesthesia care with sevoflurane and muscle relaxant	Primary: device values Secondary: effect of BIS monitoring on faster recovery time in abdominal surgery patients; time to extubation
	January 2010– September 2012 (ongoing) March 2009– February 2012 (record indicates completed but no publications referenced) February 2011– February 2012	January 2010– September 2012 (ongoing) March 2009– February 2012 (record indicates completed but no publications referenced) February 2011– February 2011– February 2011– February 2011– February 2011– February 2012 (ongoing) Adults aged elective GA with a planned duration of procedure ≥1 hour	January 2010– September 2012 nose and throat surgery (aged 1–65 years; stratified by age and surgery type) March 2009– Adults aged February ≥60 years undergoing indicates elective GA completed but no publications referenced) February 2011– ≥18 years referenced) Adults aged specified) February 2012 (nogoing) Adults aged anaesthetic not specified) BIS-guided anaesthesia with propofol and remifentanil Unblinded BIS monitoring (anaesthetic not specified) February 2012 (anaesthetic not specified)	January 2010– September 2012 (nogoing) March 2009– February 2012 (record indicates completed but no publications referenced) February 2011– September 2012 (nogoing) Adults aged 2012 (record indicates efferenced) February 2012 (regerenced) February 2012 (record indicates efferenced) February 2012 (anaesthetic not specified) February 2012 (nogoing) February 2012 (nogoing) February 2012 (nogoing) March 2009– Adults aged 200 (anaesthetic not specified) Vinblinded BIS 2010 (anaesthetic not specified) February 2012 (anaesthesia 2010 (anaesthetic not specified) February 2012 (nogoing) March 2009– Adults aged 2010 (anaesthetic not specified) February 2012 (anaesthesia 2010 (anaesthesia 20
