

Risk prediction of adverse maternal outcome before 34 weeks of gestational age

Please complete the following information:

Timepoint from baseline

- 2 days
- 3 days
- 4 days
- 5 days
- 6 days
- 7 days
- 14 days
- 21 days
- 28 days
- 35 days
- 42 days

Maternal characteristics and tests

Maternal Age year

Gestational age at diagnosis weeks days

Does the mother have exaggerated tendon reflexes?

- Yes she she exaggerated tendon reflexes No she does not

Tick any applicable maternal pre-existing conditions

- Hypertension
- Renal disease
- Diabetes meelitus
- Autoimmune disease
- Previous occurrence of pre-eclampsia

Systolic blood pressure mmHg

Pulse oximetry %

Platelet count $10^9/L$

ALT U/L

Serum urea mmol/L

Serum creatinine $\mu\text{mol}/L$

Protein creatinine ratio mg/mmol

Which treatment did the mother receive at diagnosis or within 24hours?

- Any antihypertensive MgSO₄

The adverse event risk of this women by the timepoint indicated is:
